

LF Ruffer Diversified Return Fund

Positive absolute returns with low volatility

During February the fund price rose from 103.27p to 105.49p. This compared with a return on the UK Bank Rate of 0.0%.

Our commentary this month is dominated by the impact of events in Ukraine. This war is first and foremost a human tragedy and our thoughts are with the people of Ukraine. The investment implications are secondary to the crisis, but we recognise our duty to provide investors with an update on the impact on their investments. The fund made gains earlier in the month and was broadly flat as the invasion unfolded. Geopolitical risk is unpredictable and we do not claim to position the fund in anticipation of specific events. Instead, we always hold protective assets which help us to weather market volatility in environments of heightened geopolitical risk.

The chief drivers of performance were derivative protection, gold and energy exposure. Derivative protection took two forms – interest rate protection and equity protection. We continued to use interest rate options to reduce duration risk in our inflation-linked bond holdings and this enabled us to benefit as bond yields rose for the first two weeks of the month. We took some profits in these options and the marginally higher duration since the invasion started has been helpful as bond yields have fallen. We will continue to be flexible in managing duration risk and believe that the path of rates will still be higher, but the speed of increase is now less certain. Towards the end of the month equity put options helped performance.

The fund has no direct exposure to Russia or Ukraine. We have a 1.4% position in BP, as part of our allocation to energy. BP is exiting its position in the Russian oil company Rosneft. It has underperformed its peers over the last fortnight due to this exposure, but the shares moved little on the announcement as an exit had already been priced in. Elsewhere, energy stocks have performed well for us. They have been a significant equity allocation since the beginning of the market recovery from the covid crisis. Our view that global demand would remain robust and supply would be constrained is playing out and we have been reducing exposure as part of an overall reduction in equity risk. We currently have 40% in equities, as well as protection in the shape of equity put options and exposure to credit default swaps.

We added to gold exposure in late 2021 moving from 6% to 8%. There was general investor disinterest in gold after a lacklustre 2021 and we also felt that emergent dollar weakness could see gold re-emerge as a safe haven. While we were wrong about dollar weakness, gold has undoubtedly benefitted from safe-haven demand.

Looking further ahead, the US is unlikely to incur the serious energy price inflation we expect in Europe. This may see a return to US exceptionalism. This would put upward pressure on the dollar, which in turn sucks liquidity out of broader financial markets (as well as making the Fed's life more difficult). This is likely to increase stress in markets more generally, hence our desire not to be overextended in either direction.

Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

C class February 2022 Issue 6

Investment objective

To seek to achieve positive returns in all market conditions over any 12 month period, after all costs and charges have been taken. Underlying this objective is a fundamental philosophy of capital preservation. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of 12 month periods.
